RE: Request for Support for Community Project Funding – County of Orange John Wayne Airport Generation and Distribution Upgrades Project

Dear Senator Padilla, Senator Schiff, and Congressman Min:

I write to request your support for the County of Orange's community project funding request of \$5 million for the John Wayne Airport Generation and Distribution Upgrades project. The proposed project would improve electrical infrastructure throughout the airport's property.

The award-winning John Wayne Airport has proven a major cornerstone of Orange County for more than 100 years. Today, the airport serves more than 11.7 million passengers annually, with flights to more than 40 non-stop destinations across the United States, Canada, and Mexico. John Wayne Airport, which is owned and operated by the County of Orange, is the only commercial airport in Orange County.

The proposed electrical infrastructure upgrades would significantly improve the airport's operational reliability and resilience by replacing existing engine-generator cogeneration units and plant control systems with modern technologies. The upgrades ensure that critical airport systems continue to function during utility disruptions or emergencies, supporting passenger safety and maintaining operational continuity.

For these reasons, I strongly support the John Wayne Airport Generation and Distribution Upgrades project. If you have any questions or need additional information regarding my support for this community funding project, please contact my Deputy Chief of Staff, Alyssa Napuri, at (714) 834-3550 or Alyssa.Napuri@bos5.oc.gov. Thank you in advance for your consideration.

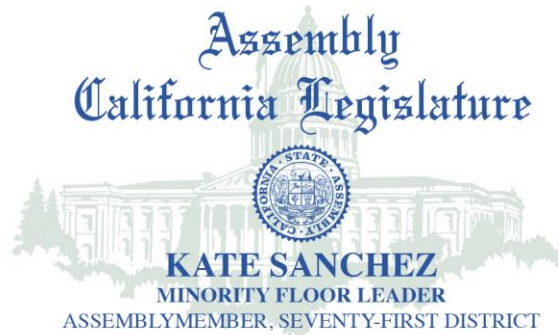

Respectfully Submitted,

Katrina Foley

RE: Request for Support for Community Project Funding – County of Orange

Dear Senator Padilla, Senator Schiff, and Congressman Min,

I write to request your support for the County of Orange's community project funding request for the John Wayne Airport Generation and Distribution Upgrades project. The proposed project would provide improvements to the electrical infrastructure throughout the airport's property.

The electrical infrastructure upgrades would significantly enhance the airport's operational efficiency, safety, sustainability, and passenger experience. Increased reliability at most of the airport gates will prevent power failures that can disrupt operations, causing flight delays and cancellations. It also ensures that aircraft ground power units, lighting, and critical flight systems always remain operational. Reliable access to power ensures that lighting and signaling systems are operational, improving night operations and visibility for ground crews.

The installation of new electrical infrastructure at John Wayne Airport also allows for modern, energy-efficient lighting and power distribution systems that reduce energy consumption. This will help airlines reduce fuel consumption by ensuring reliable electric power is available at the gates and minimizing the need for auxiliary power units that burn jet fuel while parked. Improving the electrical systems at John Wayne Airport is a critical investment in the airport's efficiency and sustainability.

Thank you in advance for your consideration.

Sincerely,

A handwritten signature in black ink that reads "Kate Sanchez". The signature is written in a cursive, flowing style.
